

# 使用说明

## 1. 引入(导入到本地)

在main.js中注入

```
import {ssoConfig} from './services/sso.login'
var serviceConfig = process.env.service;
Vue.prototype.$sso = ssoConfig(serviceConfig.ssoWebHost, serviceConfig.ssoApiHost, "sso");

import {httpConfig} from './services/http'
Vue.prototype.$http = httpConfig(serviceConfig.url, "local")
```

## 2. 所有http的交互

在vue页面中使用

```
this.$http.post();
this.$http.get();
this.$http.del();
this.$http.put();
```
